COURSEWORK

UNDERGRADUATE
Data Structures and Algorithms, Operating Systems, Object Oriented Programming, Machine Learning, Performance Optimization.

SKILLS

Hard skill:
• HTML5 • CSS3 • JavaScript • React.js • Bootstrap • Python • MySQL • Git • Adobe Photoshop • Figma • Blender •Premier Pro
Soft skill:
• Leadership • Effective communication • Teamwork • Time management • Motivation

INTERESTS

• Drawing • Photoshop • Video Editing • Photography • Networking

RESPONSIBILITIES

• Student Volunteer – NSS, Sept 2023

EXPERIENCE

SHIASH INFO SOLUTIONS PRIVATE LIMITED | Software Engineering Intern
feb 2024 - may 2024 | Chennai

- Learned more about Python Frameworks and database to back-end connectivity Crafted seamless user journeys by optimising interfaces for user access. Improved web design and usability through UX testing.

FLSMIDTH | Software Engineering Intern
Dec 2023 – Jan 2024 | Chennai

- Learned more advanced HTML5, CSS3 and also learned frameworks angular, bootstrap, ionic.
- Improved web design and usability through UX testing and responsive design.
- Created the front end from scratch using HTML, CSS, Javascript and Internal frameworks creating a better user experience.

CODECLAUSE | Python Development Intern
Sep 2023 – Nov 2023 | Chennai

- Phabricator is used daily by Facebook, Dropbox, Quora, Asana and more.
- Learned more about Key concepts in Python include basic syntax, data types (such as lists, tuples, dictionaries, and sets), control structures (if statements and loops), and functions (including lambda functions).

PROJECTS

GO GET: ALL IN ONE DONATION APP (CLOTHES, MEDICINE, FOOD, BOOK)
The purpose of developing the ”GO GET: All In One Donation App” is to combat resource wastage and promote a culture of giving on a global scale. Across the world, a significant portion of essential items such as clothes, medicine, food, and books are discarded despite being perfectly usable. Our project aims to address this issue by leveraging modern technology to facilitate the efficient redistribution of these resources to those in need.

A FOOD WASTAGE REDUCTION APP BASED ON DJANGO PYTHON APPLICATION
The app aims to encourage better food management. Our proposed solution should reduce food wastage by facilitating food sharing in India community using mobile technology.

FIRE EXTINGUISHING ROBOT
Detecting fire and extinguishing is a hazardous job for a fire extinguisher, it often risks the life of that person. This project aims in giving a technical solution to the mentioned problem. The whole system is programmed using an Arduino UNO board (ATmega328P microcontroller) which forms the brain of the system.
